

Intelligent Agent

Dynamically guide your agents in real time to the next best action

Intelligent Agent

Guide your agents and understand the complete customer journey

Intelligent Agent uses machine learning and Al to deliver the right information at the right time. By analysing all interactions and conversations, Intelligent Agent helps you to identify bottlenecks, increase efficiencies and provide an exceptional customer experience.

How does Intelligent Agent Work?

Through Intelligent Agent, agents are presented with the information they need, exactly when they need it, reducing call handling times and increasing capacity and all through a single, unified desktop.

With the ability to perform deep analysis on every single interaction, Intelligent Agent helps you to understand, manage and influence the customer journey, providing a seamless experience for both agents and customers through the use of innovative, automated and scalable agent guidance software.

Why use Intelligent Agent?

- > Reduce training time
- > Improve employee retention
- Reduce handling times
- Provide a consistent customer experience
- > Adhere to compliance rules
- > Streamline post call escalations and contact methods
- Understand internal bottlenecks
- Learn about what your customers need and drive proactive change

Key Features

Intelligent Agent Software

Guide agents through voice, email and chat conversations. Understand what to change in the customer journey using AI.

Single Agent Desktop

Single view of relevant information, removes the need for agents to log in or navigate into multiple applications during the customer interaction.

Intelligent Agent Next Best Action

Dynamic guidance based on what the customer is asking for and suggests the next best action to drive one contact resolution.
